

GET HOME SAFE WITH BRAVECTO

Your pet needs freedom to explore. You need to ensure he doesn't bring any unwanted visitors home.

Fleas can carry serious diseases, some can even be life-threatening. The flea lifecycle is long, and monthly treatments may leave gaps in protection, allowing

reinfestation in your home and driving you and your pet apart.

Give your pet the extraordinary treatment he deserves, protect your home for longer and enjoy more extraordinary moments together, with Bravecto.

< 10 DAYS

By the time you see adult fleas, it's already too late to prevent infestation. The fleas have already laid eggs around your home.

< 2 MONTHS

Adult fleas emerge from their cocoons, ready to feed on your pet. By this time, your monthly treatment is losing effect.

FLEA LIFECYCLE

≈ 10 DAYS

The flea eggs hatch as larvae, burrowing into your carpets, down cracks in floorboards and under furniture, unaffected by some monthly treatments.

11 DAYS BUT CAN BE MONTHS

Larvae turn into pupae, which stay well protected in a cocoon until they get close enough to your pet to emerge as fleas.

DRIVING FLEAS TO EXTINCTION CAN TAKE NEARLY THREE MONTHS, YOU NEED PROTECTION THAT LASTS JUST AS LONG.

Bravecto is the longest-lasting flea and tick protection available in a chew, delivering up to 12 weeks of flea and tick protection in a single dose. **Ask your vet today about how just one dose of Bravecto can help you drive fleas in your home into extinction.¹**

* Bravecto Chew is effective against *Rhipicephalus sanguineus* (brown dog tick) for 8 weeks after dosing. The most common adverse reactions were mild and short-lived vomiting, decreased appetite, diarrhea and drooling. For complete safety information, refer to the product label.
